

Patroller Knots

Brighton Ski Resort

Common Rope and Knot Terms

Tie - A generic term encompassing all the general categories of securing cordage, including: hitches, bends, and knots.

Knot - A fixed, non-movable place on a piece of cordage that is achieved through turns, bends, and tie-offs.

Hitch - A group of ties that wrap or attach to other objects or ropes. Almost always, when the object is removed, the tie will fall apart.

Bend - A tie that unites two rope ends.

Bight - A doubled section of rope, usually taken from the center of the rope, that does not cross itself.

Loop - A turn of the rope that crosses itself.

Running End The end that is not rigged or the free end

Standing Part of the Rope - All of the rope that is not fastened at the rigging point

The Working End - The end that is used to rig with or tie off to something.
